

Product Data And Specifications

Drinking Bowls

The Raindrop Drinking Bowl is made from high-grade primary ingot aluminium. The ozone-safe polystyrene float provides a greater buoyancy over a longer period. The Raindrop Drinking Bowl is also available without the usual drainage hole which could be preferable when used for pigs and emus.

Available in Aluminium or powder coated Aluminium.
Float Valve tested to 80 PSI. Flow Rate 2.75 litres per minute.

Trough Brackets

The Raindrop Trough Bracket should be used in conjunction with a receptacle such as a bath, drum, or small trough for a limited number of stock where replacement of water is not a major factor. It is a float valve which is protected by an aluminium covering to prevent stock damage and having the same float mechanisms as the Raindrop Drinking Bowl.
